

## cenitCONNECT SAP Integration for 3DEXPERIENCE

Leverage our innovative process management solutions to optimize your business processes and gain that extra competitive edge.

**cenit**

# Boost your Processes – with CENIT Process driven Solutions

## Optimized business processes: your road to success

Secure yet lean business processes boost your competitive advantage in a global market place.

### Scalable to your requirements

Our innovative solutions can grow with your needs. For us, scalability, flexibility, and an open architecture are key features of a modern process solution – a solution that will be the backbone for the execution of your business processes for many years to come.

### The best of both worlds

If you want innovative product development, you need highly innovative applications to support your developers and designers. That's why 3DEXPERIENCE from Dassault Systèmes is your best choice!

*Are you just as uncompromising in your ERP environment as in your other work and therefore rely on the undisputed market leader, SAP?*

*Have you recognized the potential of end-to-end business processes based on these enterprise solutions?*

*Are you looking for a process management solution offering seamless integration of DS V6 and SAP that scales with your needs?*

*Do you want to expand your enterprise solutions step by step and integrate them at each stage in an optimal way?*

*Is 3DEXPERIENCE more for you than just CATIA V6, and do you also want to reap the benefits of a high-performing SAP integration when using ENOVIA, DELMIA, SIMULIA and other DS toolsets?*

*Are you looking for a consulting, implementation and development partner with decades of industry experience in your sector and deep expert knowledge in the DS and SAP world?*

*And do you trust yourself the most when it comes to defining your specific business processes, but still look for advice from a competent consultant?*

## You've just found your partner and your solution!

### We offer a solution that supports clearly defined goals:

- process security and quality
- process cost reduction
- process acceleration
- fun to use

At best, any IT solution is as good as its users. That's why we focus on both the content and the wrapping. We're only satisfied when the users of our solution enjoy contributing to the business process.

### The solution in a nutshell

The key requirement for the integration product is multiple, bi-directional exchange of product data between 3DEXPERIENCE and SAP. However, true added value is generated by process integration i.e. The exchange of process data and the ability to control business processes across application boundaries.

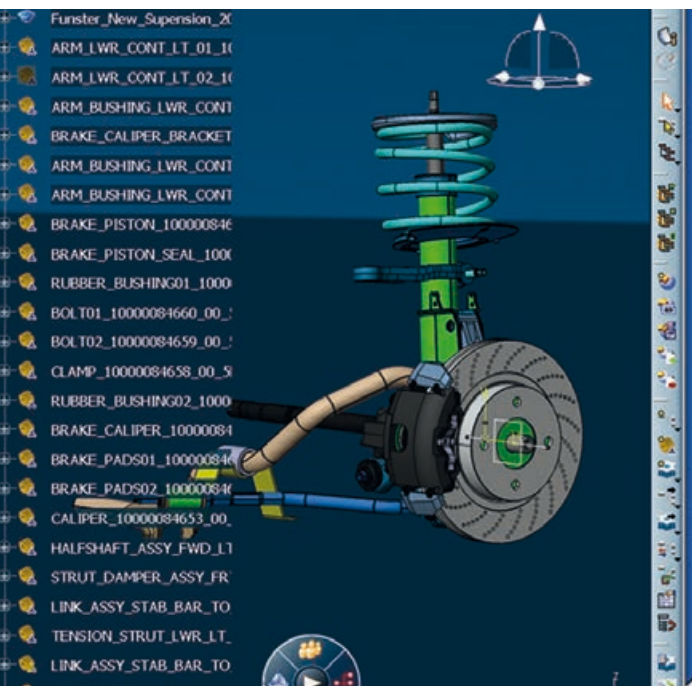

### Key Functions of the 3DEXPERIENCE-SAP-Integration

- synchronization of product data such as documents, part masters, product structures, parts lists, graphics
- synchronization of manufacturing data such as work plans, network plans, production resources
- synchronization of process data such as process ID, project ID, status, degree of maturity, change number, change master data
- synchronization of versioning and lifecycle data
- SAP Engineering Control Center support

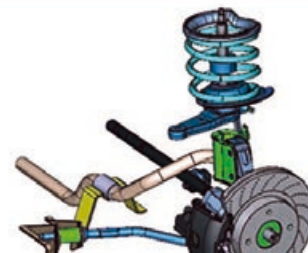

A large portion of the data synchronization is executed in the background. The integration synchronizes the data based on the configuration of a data mapping at defined process steps. This ensures a reliable data quality in both system worlds and allows users to focus on delivering value while enjoying their work.

No matter whether you “just” want to integrate CATIA V6 with SAP, wish to mesh a fully developed 3DEXPERIENCE solution with SAP over a series of product development stages, or plan to manage your SAP material masters via ENOVIA “only” – our integration will be a perfect match for your business processes.

## Our differentiation

As a development partner of Dassault Systèmes and SAP, we coordinate the development plans for the 3DEXPERIENCE-SAP integration with the development teams of our partners on an ongoing basis – that's why our integration keeps up with the evolution of your enterprise solutions, and that's how we protect your investment.

For over 20 years, we have been one of the most successful global business partners of Dassault Systèmes. With our record as a long-time CATIA, ENOVIA and DELMIA partner, we and our international teams are the right partner for a broad use of V6 for globally distributed development teams.

Since 1999, we have been an official partner of SAP SE for CATIA integrations. With more than 180 successful DS-SAP integration projects, over 10,000 users, and a team of consultants who combine decades of industry know-how, our hands-on experience will make all the difference.

## Getting down to business

Are you interested in learning more about our solution? We offer optimized packages for any phase of your decision-making process. From PLM assessments by experienced process consultants to pre-configured implementations in a test environment – we have fixed-price packages available for each and every step!

We invite you to contact us and would be more than happy to help you select the right solution and package for your specific needs.

## CENIT AG

For over 26 years, CENIT has been successfully active as a leading consulting and software specialist for optimizing business processes in the Digital Factory, Product Lifecycle Management (PLM), SAP Solutions, Enterprise Information Management (EIM), Business Intelligence (BI), and Application Management Services (AMS) fields.

CENIT complements standard solutions by strategic partners such as DASSAULT SYSTEMES, SAP and IBM by providing well-established own software solutions. These include the FASTSUITE product family for software solutions in the Digital Factory field, cenitCONNECT for SAP PLM-related processes, cenitSPIN as a high-performance PLM Desktop, CENIT ECLISO for efficient information management as well as CENIT SERVICEMANAGER – a platform for integrating software systems into the ECM system.

The enterprise employs around 700 staff worldwide, serving customers primarily from the automotive, aerospace, mechanical engineering, tooling and molding, financial services, commercial and consumer goods industries.
