

cenitCONNECT Collaboration

SAP systems in the global network –

Manage connections to OEMs, suppliers, partners, and your branch locations easily and securely as never before.

Vorteile und Nutzen

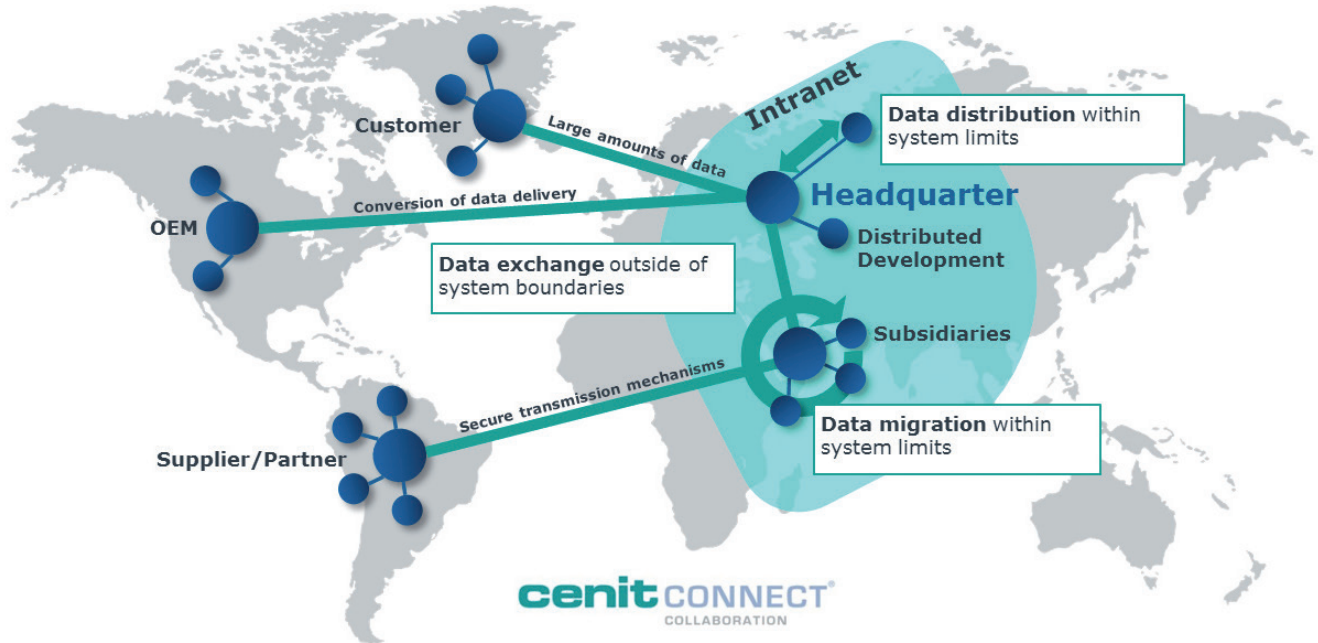

- High user acceptance through availability of large volume of data without delays
- Significant reduction of adjustments through information that is always up-to-date
- Transparent collaboration because processes are documented for participants and can be traced by them with no additional cost
- Security and flexibility because modern methods protect the data against unauthorized use
- Speedy process and project-related adjustment of rights, roles, and rules
- Improved quality with lower costs thanks to world-wide availability of necessary product data

Product development and production now take place in teams. Strongly networked partnerships define the image – customers, suppliers, and worldwide locations determine everyday work. All participants are assigned up-to-date 3D product data, drawings, reports, etc. in a suitable format and with the necessary quality.

Collaboration is a key business process for all modern companies. External communication with customers, OEMs, suppliers, and partners via portals and data dispatch tools only represent one part of the challenge in this. Secure and controlled internal communication, the display of data models from main administration to branch locations, as well as the harmonization of several PDM/PLM systems are all challenges to which companies must respond. **cenitCONNECT Collaboration** industry solutions support companies with these challenges with dedicated software tools offering maximum flexibility and security.

Collaboration in the global networks

Centers distributed around the world carry out development work with teams collaborating in a joint process. Information is to be used in the system in an up-to-date manner without any delays. With the **cenitCONNECT Document Distribution Manager**, CENIT ensures local availability in an efficient and intelligent manner and therefore best possible performance when accessing large volumes of data, such as 3D originals.

cenitCONNECT Enterprise Connector

Can be used inside and outside of system boundaries. For communication with customers, subsidiaries or OEMs For the harmonization of several PDM/PLM systems or for the formation of data models – make large data quantities available with secure transfer mechanisms and conversion methods on dispatch.

cenitCONNECT Document Distribution Manager

Optimized provision of data transfers with intelligent and controlled storage, in compliance with all conventions. This allows for various migration strategies.

Co-operation that goes beyond company boundaries

Close partners collaborate on a joint platform in processes with full access to all the necessary data. It must be possible for information to be used in a non-redundant and up-to-date manner. The access via the Internet enables the flexible integration of global teams – both internally and of external partners. Based on the security measures of SAP PLM7 concerning direct teamwork, CENIT offers industry-specific forms. A tailored entitlement concept for the respective scenarios ensures protection of the processes, without hindering the daily work.

Collaboration of independent partners

Only the flexible provision of clearly defined work packages enables the inclusion of partners that work on partial tasks irrespective of the joint backbone. The simple reintegration of the work results, the speedy exchange of ideas, evaluations, and modifications are essential. The cenitCONNECT Enterprise Connector enables the necessary adjustments of the processes to the conditions of partnership, without a large configuration requirement. In a manner that is fully transparent for the involved parties, naming conventions are complied with, the necessary formats for 2D and 3D data are produced, and the quality of the work packages is ensured.
